

CODTECH Internship - Task 1

Cloud Storage Setup

Objective: Create and configure cloud storage using AWS S3 or Google Cloud Storage.

Task Description:

Create a cloud storage bucket, upload sample files, and configure access permissions. This report can be submitted as documentation of the completed task.

Implementation Steps (AWS S3 Example):

1. Sign in to AWS Management Console.
2. Open Amazon S3 service.
3. Create a new bucket with a unique name.
4. Select the desired AWS region.
5. Configure bucket settings and permissions.
6. Upload sample files to the bucket.
7. Verify file accessibility and security settings.

Deliverables:

- Bucket successfully created.
- Sample files uploaded.
- Access permissions configured.

Conclusion: Cloud storage was successfully configured and tested.
